

# Barriers in Health and Social Care Access and Navigation for Elder Orphans: A Scoping Review of the Literature

Lucy Kervin,<sup>1</sup> Indira Riadi,<sup>1</sup> Kelly Teo,<sup>1</sup> Ryan Churchill,<sup>1</sup> Theodore D. Cosco<sup>1,2</sup>

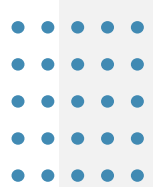

1. Gerontology Research Centre, Department of Gerontology, Simon Fraser University, Vancouver, British Columbia, Canada

2. Institute of Population Ageing, University of Oxford, Oxford, Oxfordshire, UK

# Presentation Overview

- Background/Context
- Objective/Choice of Methods
- Scoping Review Methodology
- Developing the Research Question and Strategy (PCC)
- Criteria for Study Eligibility
- Information Sources
- Screening
- Overview of Search and Selection
- Planned Structured Extraction & Synthesis
- Results
- Preliminary Comments and Thoughts

# Background: A Growing Vulnerable Population

**‘Unbefriended’ patients<sup>6</sup>**  
- Lacking both capacity to  
make one’s own informed  
health decisions + surrogate

- Family members have traditionally supplied informal care in later life.  
(personal care, minor medical procedures, administrative tasks, social and emotional support)<sup>1</sup>
- Social and demographic trends are shifting familial support availability for older adults both locally and globally.  
(family mobility, divorce/stepfamily formation, declining fertility, intergenerational ambivalence)<sup>2,3,4</sup>
- A ‘call to action’ Carney et al. (2016)<sup>5</sup>

## ELDER ORPHANS

*“Aged, community-dwelling individuals who are socially and/or physically isolated, without an available known family member or designated surrogate or caregiver.”*

# Objective & Choice of Methods

## Traditional Systematic Review

- Applied within health research to assess the effectiveness/experience of interventions.<sup>7</sup>
- **Incongruous** with broad health care delivery research questions best answered through exploring wide range of evidence.<sup>7</sup>

## What we wanted to find out:

“What are the barriers encountered by older adults aging without familial/informal support, or elder orphans, in accessing needed services and navigating current health and social care systems?”

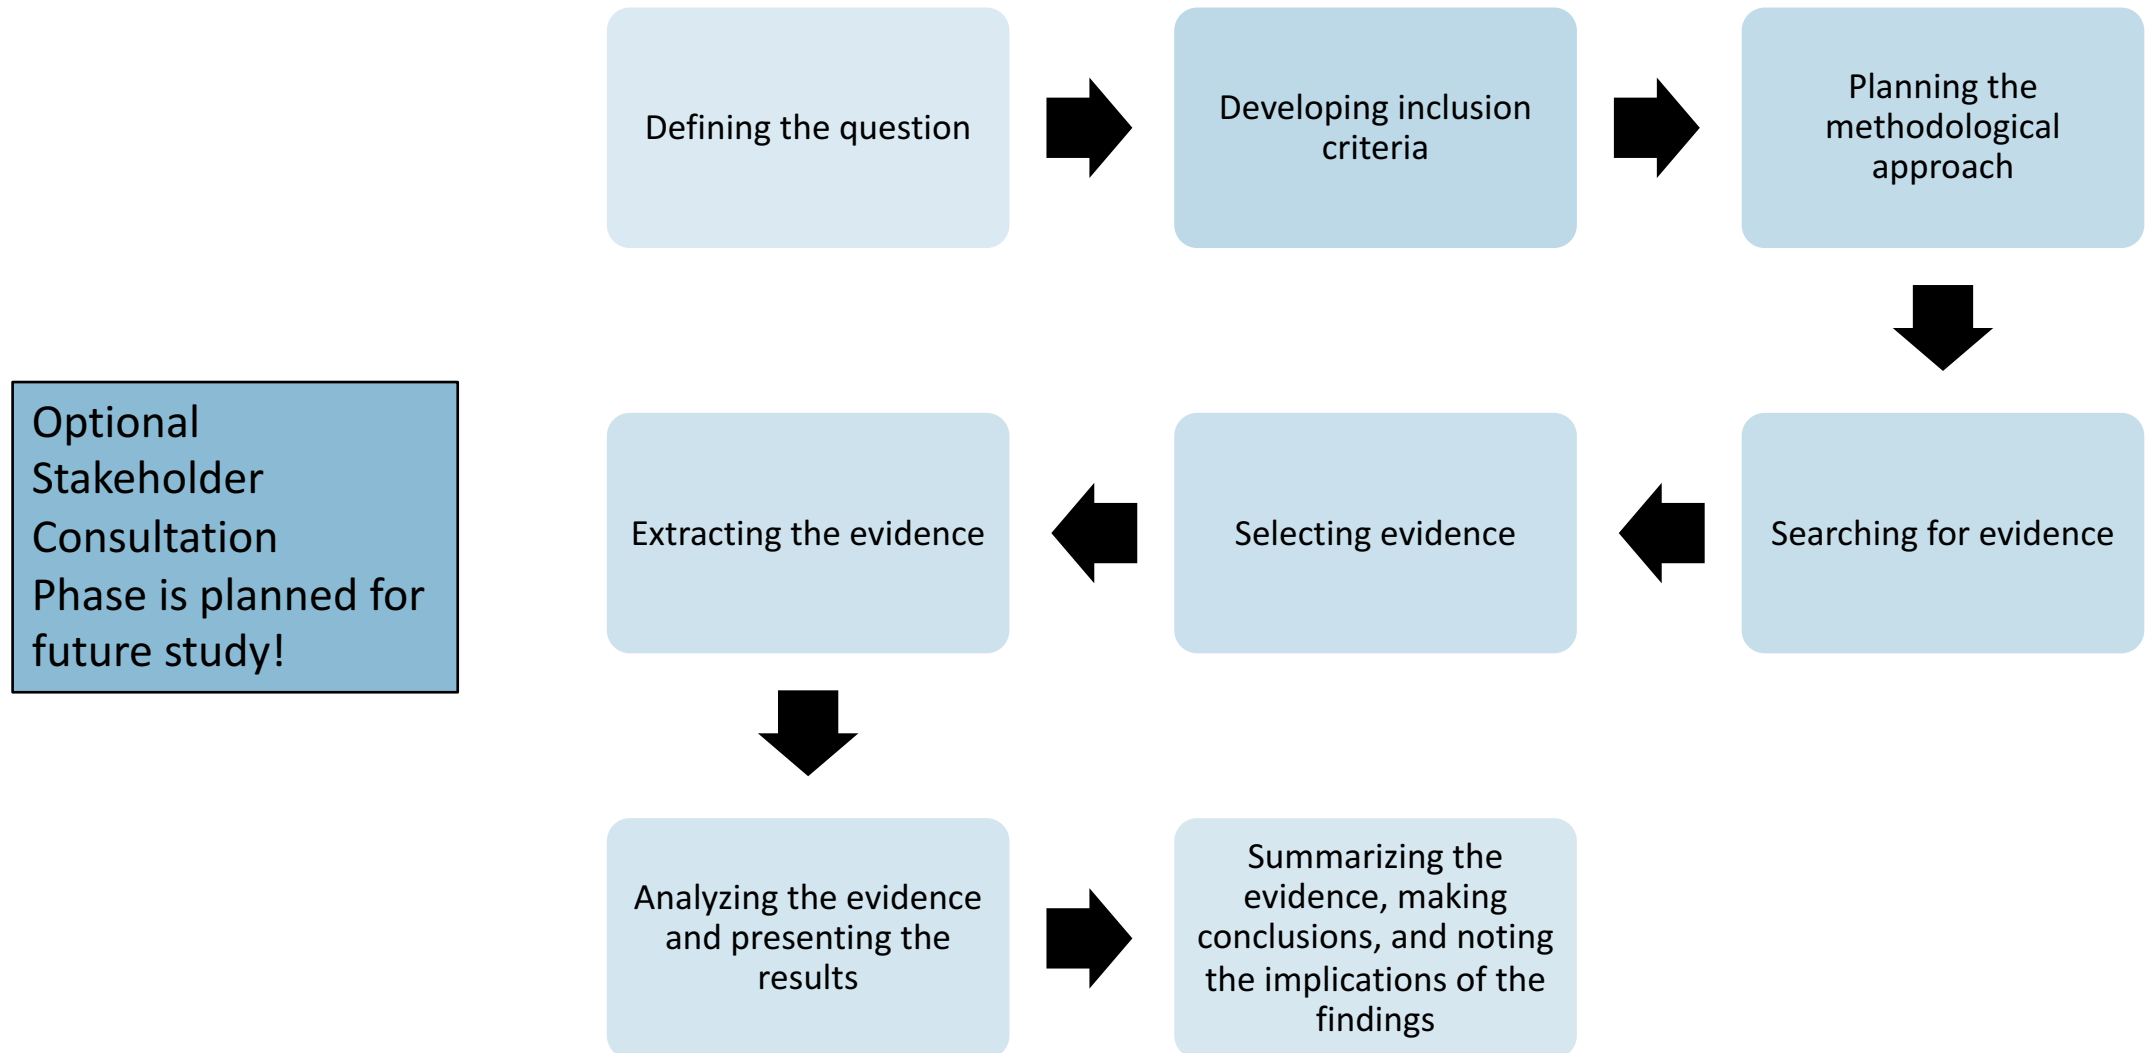

“What are potential facilitating factors in identifying and addressing this population’s barriers in accessing defined services?”

## Why a Scoping Review?

- Methodologically rigorous approach for exploring topics that are emergent, complex and/or diverse, have yet to be comprehensively reviewed.<sup>7</sup>
- Enables review and synthesis of studies of various methodologies (quantitative, qualitative, mixed methods).<sup>8</sup>

# Scoping Review Methodology (Arksey & O'Malley)<sup>9</sup>

# Research Question and Search Strategy 'PCC'<sup>10</sup>

## Population

Isolated older adults without  
familial/informal support

“elder\* orphan\*”, “adult orphan\*”, “orphan\*  
older person”, “solo age\*”, unattached older  
adult\*”, never married older adult\*”,  
“unbefriended older adult\*” kinless older  
adult\*”, “unbefriended elder\*”, “isolated  
older adult\*”, “isolated elder\*”, “ageing  
alone”

## Concept

Barriers/facilitators in  
navigation/service access

“barrier\*”, “factor\*”, “challenge\*”,  
“obstacle\*”, “attitude\*”, “perceive\*”,  
“perception\*”, “opinion\*”, “belief\*”,  
“knowledge”, “implement\*”, “facilitate\*”,  
“disparit\*”, “access\*”, “need\*”, “usage”,  
“deliver\*”, “util\*”, “access\*”, “inacces\*”,  
“provision\*”, “availab\*”, “prohibit\*”,  
“affordab\*”, “applicab\*”, “navig\*”

## Context

Health/social care and services

“health”, “healthcare”, “health care”,  
“primary care”, “secondary care”, “tertiary  
care”, “emergency care”, “community  
healthcare”, “service\*”, “program\*”,  
“resource\*”, “treatment\*”, “intervention\*”,  
“strateg\*”, “refer\*”, “consult\*”, “social care”.  
“social work\*”, “home care”, “voluntary care  
service\*”, “community care”, “social service\*”

# Criteria for Eligibility

## Inclusion

- Reference to barriers and/or facilitators to navigation of health and/or social care services and systems by the population of interest
- Date of publication 01/2005 – 02/2021\*
- Publication in English
- Peer-reviewed full report of study
- Inclusion of participants age 65+ who are identified as being without access to informal/familial support, are social and/or physically isolated and are living within the community.

## Exclusion

- Non-human studies
- Non-primary studies (ex. Review articles, commentaries, conference abstracts, theses or dissertations)
- Studies involving only participants whose primary residence is an environment providing impromptu access to 24/hr care.\*\*
- Studies focusing only on any other age groups or only care professionals.\*\*\*

\* Term 'elder orphan' first arose in early 2000s in lay press,<sup>11,12</sup> nursing journal in 2005<sup>13</sup>

\*\* Enables more meaningful synthesis of smaller # of relevant studies, facilitates identification of barriers experienced while community-dwelling which may (in part) lead to early institutionalization.

\*\*\*Studies with both E.Os and other populations were included if findings specific to EOs could be clearly identified and extracted.

# Methods: Information Sources

## Pilot Search (keyword identification)

- Pubmed
- Scopus

## Supplementary Sources/ Strategies

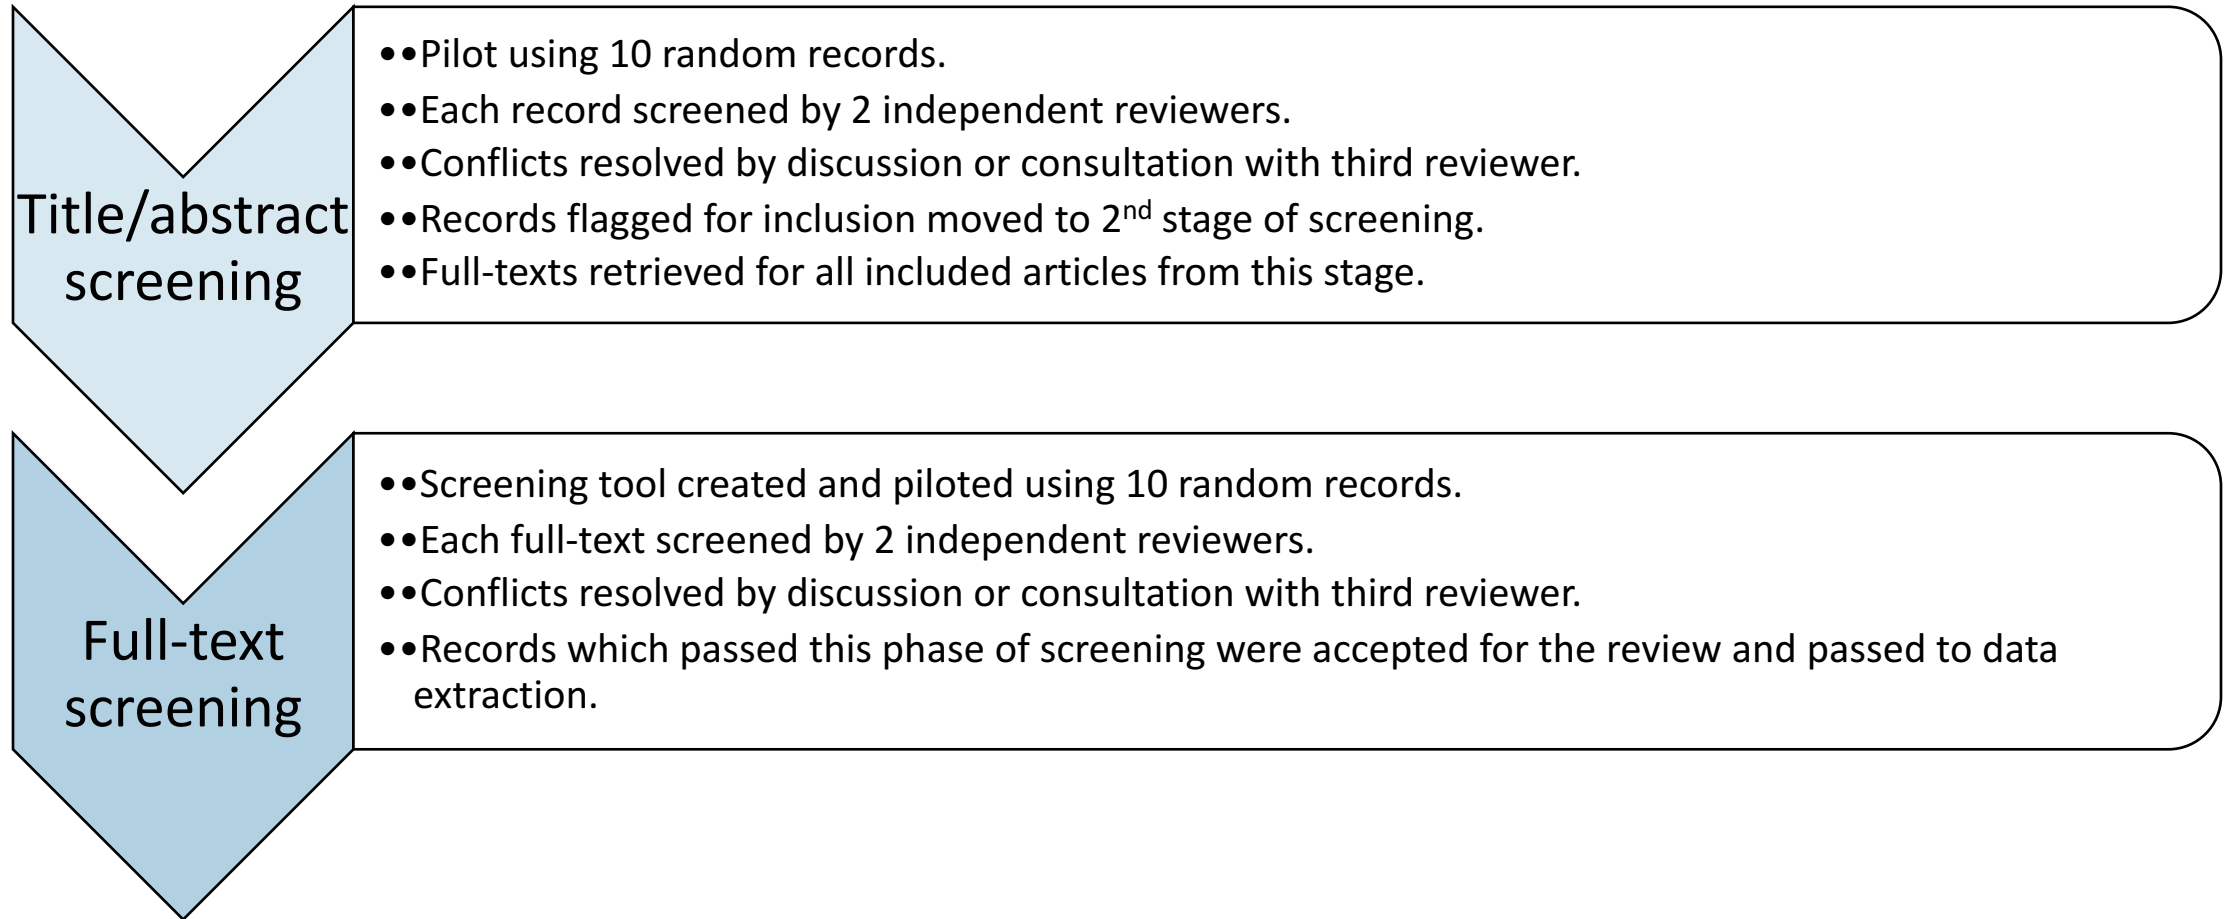

- Reference lists of all included articles
- Hand searches of key journal: Age and Aging, Journals of Gerontology Series B, Journal of the American Geriatrics Society, The Gerontologist.

## Electronic Databases

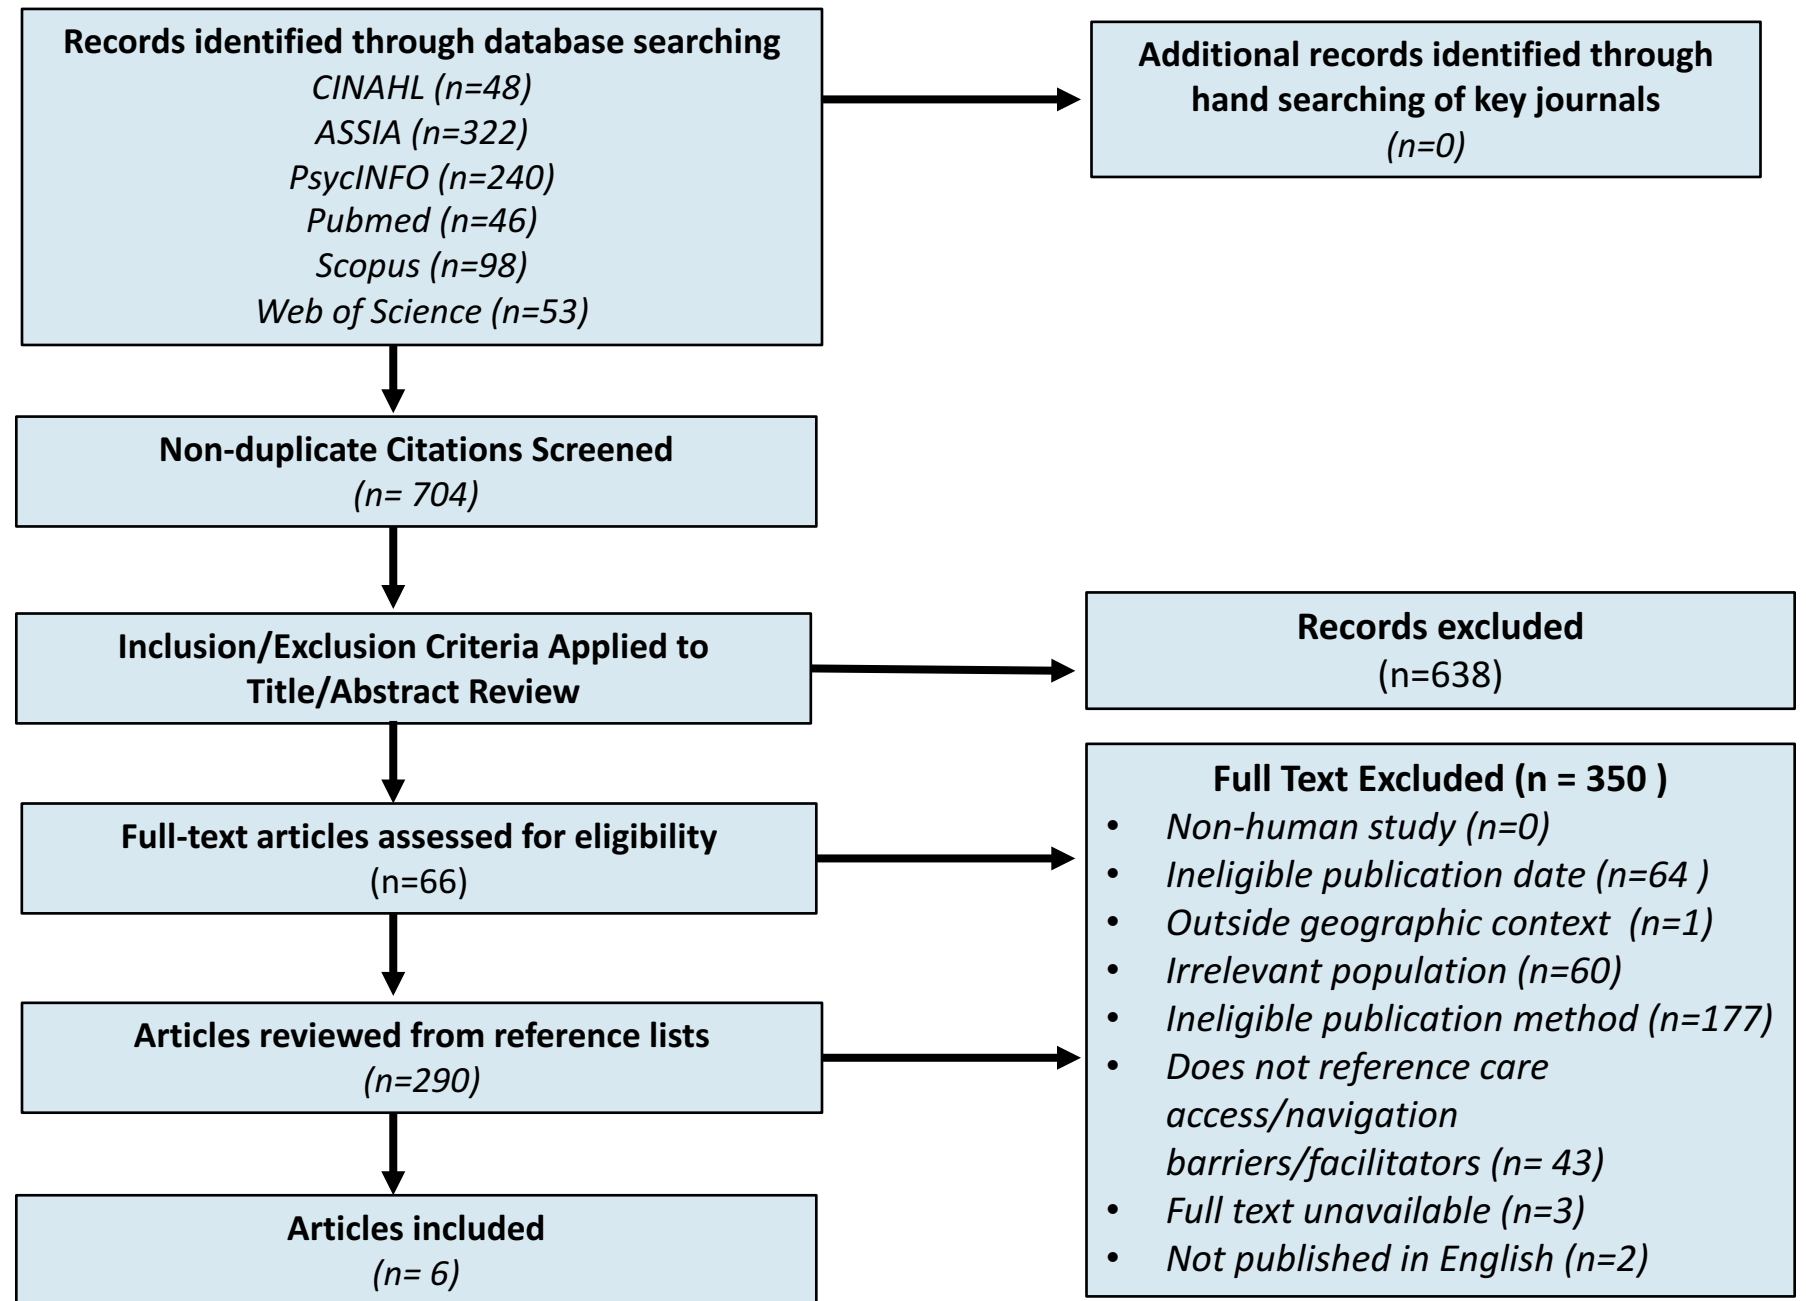

- CINAHL Complete
- ASSIA
- Pubmed
- Scopus
- Web of Science
- PsycINFO

# Methods: Screening Stage 1 + 2

# Search and Study Selection

# Methods: Data Extraction

## Process

- Data extraction performed by lead author (LK)
- Extraction form (excel) drafted in consideration of the JBI Manual for Evidence Synthesis<sup>10</sup> and reviewed by research team.

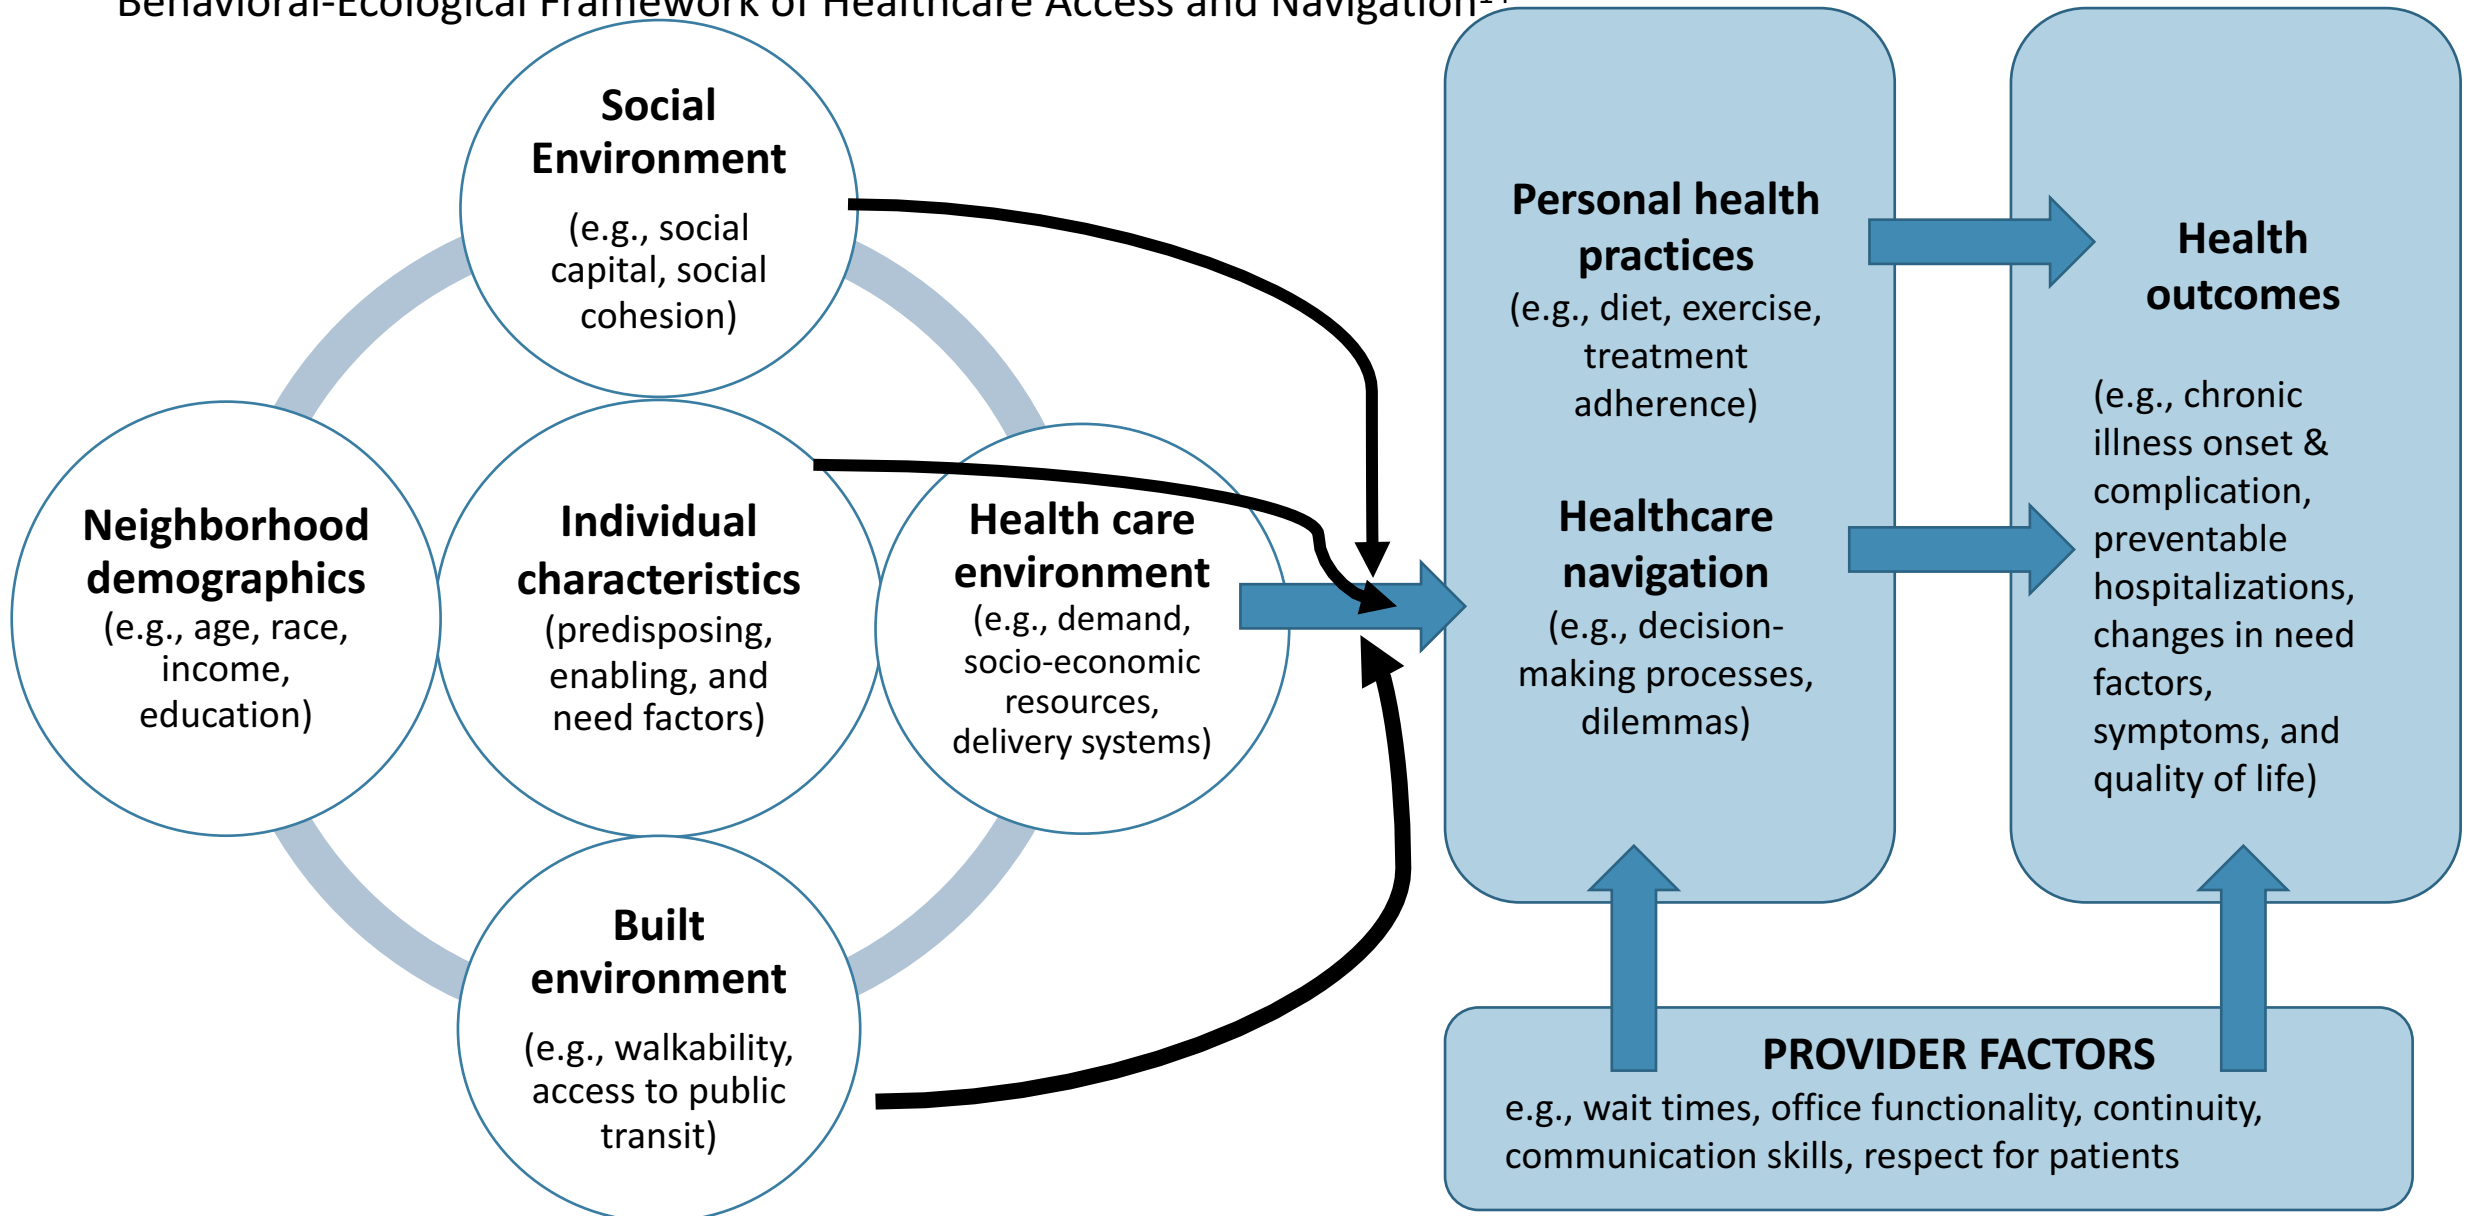

## Data Extraction Categories

- Article details (authors, year, journal, country, continent)
- Setting
- Method
- Objective
- Sample Details and Demographics (age range, ethnicity/cultural status, gender, living arrangements).
- Barriers to care access/navigation\*
- Facilitators of care access/system navigation\*

\*Framed using Behavioral-Ecological Framework of Healthcare Access and Navigation<sup>14</sup>

## Next Steps: A Structured Synthesis

### Behavioral-Ecological Framework of Healthcare Access and Navigation<sup>14</sup>

# Results

Author (Year)	Location	Study Design	Objective	Sample
Machielse (2015)	The Netherlands EUR	Qualitative interviews, analysis of social work logbooks	To arrive at a 'social isolation typology' to offer insight into the heterogeneity of socially isolated older adults that may help social workers in providing suitable interventions for specific clients.	Socially isolated older adults (n=43) age 55-94, all living alone without social supportive relationships (practical, emotional, companionship) and the social workers supporting them (n=16).
Machielse (2020)	The Netherlands EUR	Qualitative interviews	To investigate the needs and subjective experiences of older adults who have been isolated for a long time and have problems in multiple life domains.	Severely socially isolated older adults (n=25), age 60+, absence of social contacts with family/friends, absence of supportive relationships for 5+ years, problems in multiple life domains.
Montayre et al. (2020)	New Zealand OC	Qualitative interviews	To explore the views of older adults on the use of the terminology 'elder orphans' and the implication of using the terminology in health and social care systems.	Community-dwelling older adults (n=11) age 67-87, living independently and lacking a close family member/designate surrogate/caregiver in NZ.
Portacolone (2013)	United States NA	Ethnography	To capture the experience of the condition of living alone in the United States.	Solo-dwelling older adults (n=47) age 75+, never married, widowed, divorced, or married to a spouse who was institutionalized.
Portacolone (2015)	United States NA	Ethnography	To assess the values, preferences, and concerns of a diverse sample of older Americans living alone.	Older San Franciscans living alone (n=47) age 75+, without a cohabitant in a non-institutional setting.
Thaggard & Montayre (2019)	New Zealand OC	Qualitative interviews	To explore the experiences of 'elder orphans' living independently in the community on their own without immediate close family support regarding health and social care issues.	Community-dwelling older adults (n=11), age 67-87, living independently and lacking a close family member/designate surrogate or caregiver in NZ.

# Preliminary Comments

- No relevant Canadian literature was identified.
  - All studies identified used qualitative approaches.
  - A lack of conceptual clarity is problematic in synthesis of available knowledge.
  - A focus on 'lived experience' rather than explicit exploration of issues in care access and navigation.
  - Supplementary review of grey literature may be warranted.
- 
- **Questions?**
